

## DESCRIPTION

The 1400 High Efficiency Series DC/DC Converter applies advanced technology and is configured specifically for electric vehicles. Available in 250 W and 375 W models, the devices provide a precise regulated output of 12.0 or 24.0 volts for computer terminals and communication equipment. Provides 13.5 or 28.0 volts for driving lamps and charging auxiliary batteries.

## APPLICATION

Designed to provide a reduced voltage supply to power auxiliary electrical systems, the Curtis 1400 Series High Efficiency DC/DC Converters achieve unmatched levels of efficiency and safety.

## FEATURES

- Maximum pulse power exceeds $125 \%$ of the nominal rating.
- Simple to install, compact and versatile-can be mounted in any position.
- Safe to use, di-electrically isolated output, thermal protection, transient protection, reverse polarity protection.
- Provides power to auxiliary electrical circuits on an electrical vehicle without recourse to battery tapping which is unsafe, damaging to the battery and may contravene EC regulations.
- Regulated outputs preclude lights from dimming and other effects of voltage drop caused by battery loading.
- Input and output are di-electrically isolated for maximum safety.
- Over $85 \%$ efficient with high power density.
- The output is regulated to $+/-1.5 \%$. Model 1400 Series is superior to previously available converters and prevents battery damage and unsafe installations caused by battery tappings.
- Due to superior efficiency less heat is generated which, together with transient protection, leads to improved reliability.
- Smaller, lighter and significantly more quiet than conventional converters.

## OPTIONS

- Available in both 250 Watt peak and 375 Watt peak models.
- Range of models to cover 24 to 96 volt input with 12.0, 13.5, 24.0 or 28.0 volt output.
